

eNVicooler Silencer

Silence is one of the most important considered features, while choosing your PC parts. To add 12/7V 3-pin adapter on your PC fan connector is very simple way, how to reduce the useless noise. Simply add eNVicooler Silencer between the 3pin power cable and the fan connector and instead of 12V, your fan will be working on 7V only. The fan speed will be decreased dependably and with lower RPM, the noise will be lower, too.

Technical specification

Set	1 pcs
Color	White
Package	Plastic bag with hanging paper
